APGEN3000/HC Specification 1.23

A compact 9 kHz to 3.0 GHz RF Signal Generator

The APGEN3000 is a fast-switching RF Signal Generator with dedicated modulation and trigger capabilities. The APGEN3000 covers a frequency range from 9 kHz to 3.0 GHz and is ideally suited for a wide range of application, where good signal quality, fast switching, and accurate and wide output power range is required.

NOTE:

The APGEN is available in two form factors, the APGEN3000 is the standard black module enclosure, the APGEN3000HC is optional in a yellow enclosure with front panel control (see APSIN2010HC for comparison). APGEN3000 and APGEN3000HC share the same specifications.

The APGEN3000(HC) offers various control interfaces like USB, LAN, or GPIB (only APGEN3000HC). Each interface allows easy and fast communication using SCPI 1999 command set. Remote control of the instrument can be quickly attained from any host system. A customer-supplied application programming interface (API) or programming examples for Matlab, Labview, C++, and other commercially available tools make implementation very straightforward.

Specifications

The specifications in the following pages describe the warranted performance of the signal generator for 25 ± 10 °C after a 30 minute warm-up period. Typical specifications describe expected, but not warranted performance. Min and Max specifications are warranted.
