The Agilent Technologies 8924C CDMA mobile station test set provides the key set of measurements to verify the performance of dual-mode CDMA mobile phones operating from 500 to 1000

MHz. With the Agilent Technologies 83236B PCS Interface, the 8924C additionally offers CDMA mobile testing from 1700 to 2000 MHz. Acting as a calibrated, high performance CDMA base station, the 8924C verifies not only the parametric characteristics of CDMA phones, but also the functional aspects of phone performance.

The 8924C's full AMPS, NAMPS, EAMPS, TACS, NTACS, ETACS, and JTACS test capability saves you space, cost, and training expenses by allowing you to make both analog and CDMA digital measurements with the same instrument.

For complete call processing verification, the 8924C supports both mobile and base station initiated call connect and disconnect. Once a phone call is established, verifying the overall functionality of a CDMA mobile is simple using the 8924C's voice echo mode. For testing a variety of protocol formats, the 8924C offers six user selectable protocol stacks: IS-95, IS-95A, TSB-74, J-STD-008, ARIB T53, and KOREAN PCS. The 8924C also supports a number of service options, including 9600 BPS and 14,400 BPS traffic channel configurations.

## High Accuracy CDMA Source for CDMA Receiver Test

Active cell site emulation in the 8924C is supplied by Sector A. The Sector A source supports the following CDMA channels: pilot, sync, paging, traffic, and orthogonal channel noise source (OCNS). In addition, the 8924C has a second sector for testing softer hand-offs. Sector B is a partial sector that has a pilot channel, a traffic channel, and an OCNS channel. An additive white Gaussian noise (AWGN) Source is also included to provide the interference generated by adjacent cells in a working CDMA network. The 8924C measures receiver frame error rate (FER) at all four data rates used in the CDMA system: full, half, quarter, and one-eighth. Confidence limit technology is used to reduce receiver test time to an absolute minimum.

## CDMA Transmitter Measurements

The 8924C provides an average power measurement based on new DSP technology. A DSP based channel power measurement enables the 8924C to achieve accurate low level CDMA power measurements. Access probe power measurements are also available. The 8924C measures transmitted waveform quality by using the IS-98A/J-STD-018 recommended correlated power method, also known as the rho ( $\rho$ ) measurement. In addition, the rho measurement reports the frequency error, modulation phase and amplitude error, and the carrier feedthrough.

## Hand-off Verification

To speed testing, the 8924C supports hard hand-offs between RF channels. CDMA to analog hand-offs from both cellular and PCS bands are also supported. With two configurable CDMA sectors, the 8924C can verify the ability of a CDMA mobile to support softer hand-offs. Two 8924C test sets can be synchronized for complete idle and soft hand-off testing.

## Authentication and Short Message Service Support

The 8924C provides the necessary features for testing a CDMA mobile station's ability to perform call processing functions with authentication for Korea and the United States. Also, the 8924C supports mobile terminated SMS.

## Automated Software

The new E8290A PoST (point of service test) software makes the 8924C an automated CDMA test solution. The E8290A quickly provides accurate phone performance and quality data at the point of sale. This PC-based solution is very easy to use, reduces churn, reduces NTF (no trouble found), and improves customer care.

The 83217A CDMA dual-mode mobile station test software can also be used to automate CDMA and analog mobile phone measurements. The 83217A solution does not require a PC. Rather, automatic tests can be completely set up using the front panel of the 8924C. Options are available to meet your test needs for CDMA, AMPS, NAMPS, JTACS, NTACS, U.S. PCS, and Korean PCS phones.

**Specifications** describe the instrument's warranted performance and apply after a 30 minute warm-up. These specifications are valid over the 8924C's entire operating environmental range unless otherwise noted. Specifications are subject to change without notice.

**Supplemental Characteristics** (*shown in italics*) are intended to provide additional information, useful in applying the instrument by giving typical expected, but non-warranted, performance.

### Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

#### Our Promise

"Our Promise" means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

#### Your Advantage

"Your Advantage" means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and on-site education and training, as well as design, system integration, project management, and other professional services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.
